

Solar Design Contest –  
Solarize UARK Campus

# Design Contest Kick-off

Department of Mechanical Engineering  
The University of Arkansas

## Agenda

- Introduction
- Participation
- Rules and Instructions
- Evaluation and Awarding

# Introduction

## Who We Are

SiDi Lab

The Concord Consortium

Zhenghui Sha  
Assistant Professor  
Dept. of Mechanical  
Engineering  
University of Arkansas

Charles Xie  
Senior Scientist  
The Concord  
Consortium

Molla H. Rahman  
Research Assistant  
Dept. of Mechanical  
Engineering  
University of Arkansas

Xingang Li  
Research Assistant  
Dept. of Mechanical  
Engineering  
University of Arkansas

John Clay  
Technical Assistant  
Dept. of Mechanical  
Engineering  
University of Arkansas

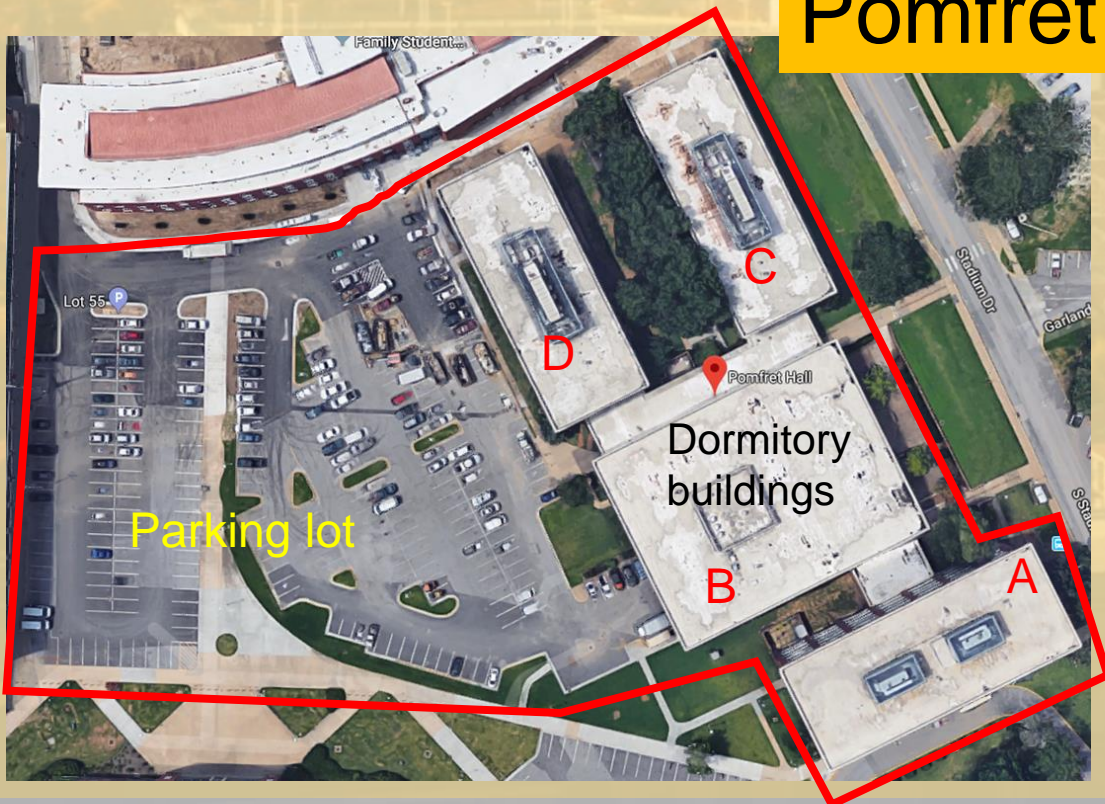

- **Motivate** more students to learn energy systems design in their future careers
- **Develop** forward-thinking designs for solar energy systems
- **Help** students understand how solar energy is generated and used
- **Draw** public attention toward sustainable energy

The design challenge: Deliver a solar energy system solution for an on-campus apartment complex.

### Pomfret Hall

Produce a computer-aided design (CAD) solution to construct a solar energy system for Pomfret Hall at UARK.

- **Understand** basic solar science knowledge
- **Learn** how to design a solar energy system using Energy3D (CAD software)
- **Analyze** the design problem and **identify** the key design variables
- **Produce** conceptual design solutions
- **Design** a detailed scheme of rooftop solar panels and a layout of ground solar canopies on the parking lot with the objective of maximizing annual yield energy under a certain budget
- **Submit** your solution to us for judging

## What You Will Win

- 
- 01  
WHO
- 02  
WHY
- 03  
WHAT  
CHALLENGE
- 04  
HOW  
TO WIN
- 05  
WHAT  
YOU WIN

## Agenda

- Introduction
- **Participation**
- Rules and Instructions
- Evaluation and Awarding

Who can participate

Why participate

# No Experience Required!

Anyone affiliated with UARK can participate.

Where to engage

When to engage

Who can participate

Why participate

Where to engage

When to compete

- Gain **knowledge** and **experience** about solar energy system design
- Obtain experience in solving **real-world design problems**
- Build your **resume**
- Win prize **money**

Who can participate

Why participate

Where to engage

When to engage

Day 0: Design Challenge

Kick-off; Receive all needed documents

Day 1: Design challenge officially begins

Day 3, Day 4, and Day 7 at 4-5 pm: Knowledge Support Sessions

Day 8: Submissions Due

Day 11 – 15: At your leisure, complete the Psychological tests

TBD: Virtual Award Ceremony

Who can participate

Why participate

Where to engage

When to engage

The comfort of your own room!

All tasks required to complete the Design Challenge are to be completed on your own devices, wherever you see fit.

## Agenda

- Introduction
- Participation
- **Rules and Instructions**
- Evaluation and Awarding

1. All participants must complete their design **independently**.
2. Do **not cheat** and maintain your **highest integrity**.
3. Sign the **Integrity Agreement** and **Consent Form**.
4. You have **one week**, i.e., 7 days, to complete your design.
5. Deliverable packages submitted after the **deadline** are ineligible to compete.
6. Judges may not participate in the contest.
7. Complete ALL **psychological tasks** to be eligible for consideration of judgement.

**The following resources can be found on our website:**

<https://sidilab.net/sidi-resources/cad-based-solar-design-contest/>

## **Documents on how to complete the design**

- “Design Challenge Flowsheet”
- “The Design Problem”
- “Energy3D Download Instructions”
- “Energy3D Tutorial”
- “Solar Science Information”
- “Data Submission Instructions”

## **The model where the design must be done**

- “Design Contest.ng3”

## **Documents to submit after completing the design**

- “Design Answer Sheet”
- “Design Report”
- “Parking Lot 2D Sketch”
- A .zip file of your log data from the “Design Contest.ng3” file
- The “Design Contest.ng3” file

# Rules and Instructions

# Energy3D Overview

Engineering Analysis    Tutorials for design and experiment    Analysis result    Example of solar system design    Workspace    Notepad    Project detail    Cost analysis

The interface includes a menu bar (File, Edit, View, Analysis, Examples, Tutorials, Help) and a toolbar with icons for various simulation components. A sidebar on the left lists simulation settings: Weather, Buildings, Solar Panels, Heliostats, Parabolic Troughs, Parabolic Dishes, Linear Fresnel Reflectors, Sensors, and Group. A central workspace displays a 3D model of a house with solar panels. A 'Simulation Settings...' dialog box is open, showing 'Methods of Engineering Design' selected. A 'Project detail' panel on the right shows project information: Date: December 20, Dallas, TX; Time: 11:00 AM; Latitude: 32; Temp: 14 °C; Sunshiner: 5.8 hours; Foundation (id = 2); Size: 16x12x0.2m, Area: 192m²; Position: (0, 0)m; Azimuth: 180°; Building #2; Thermostat: 20 °C; Adjust; Basics, Cost, Energy; Total (\$): \$201,498. A pie chart shows energy breakdown: Walls (42.89%), Windows (2.65%), Roof (14.74%), Foundation (16.29%), Floors (0%), Doors (0.56%), Solar Panels (21.89%), and Misc (0.99%). A 'Notepad' window is open at the bottom.

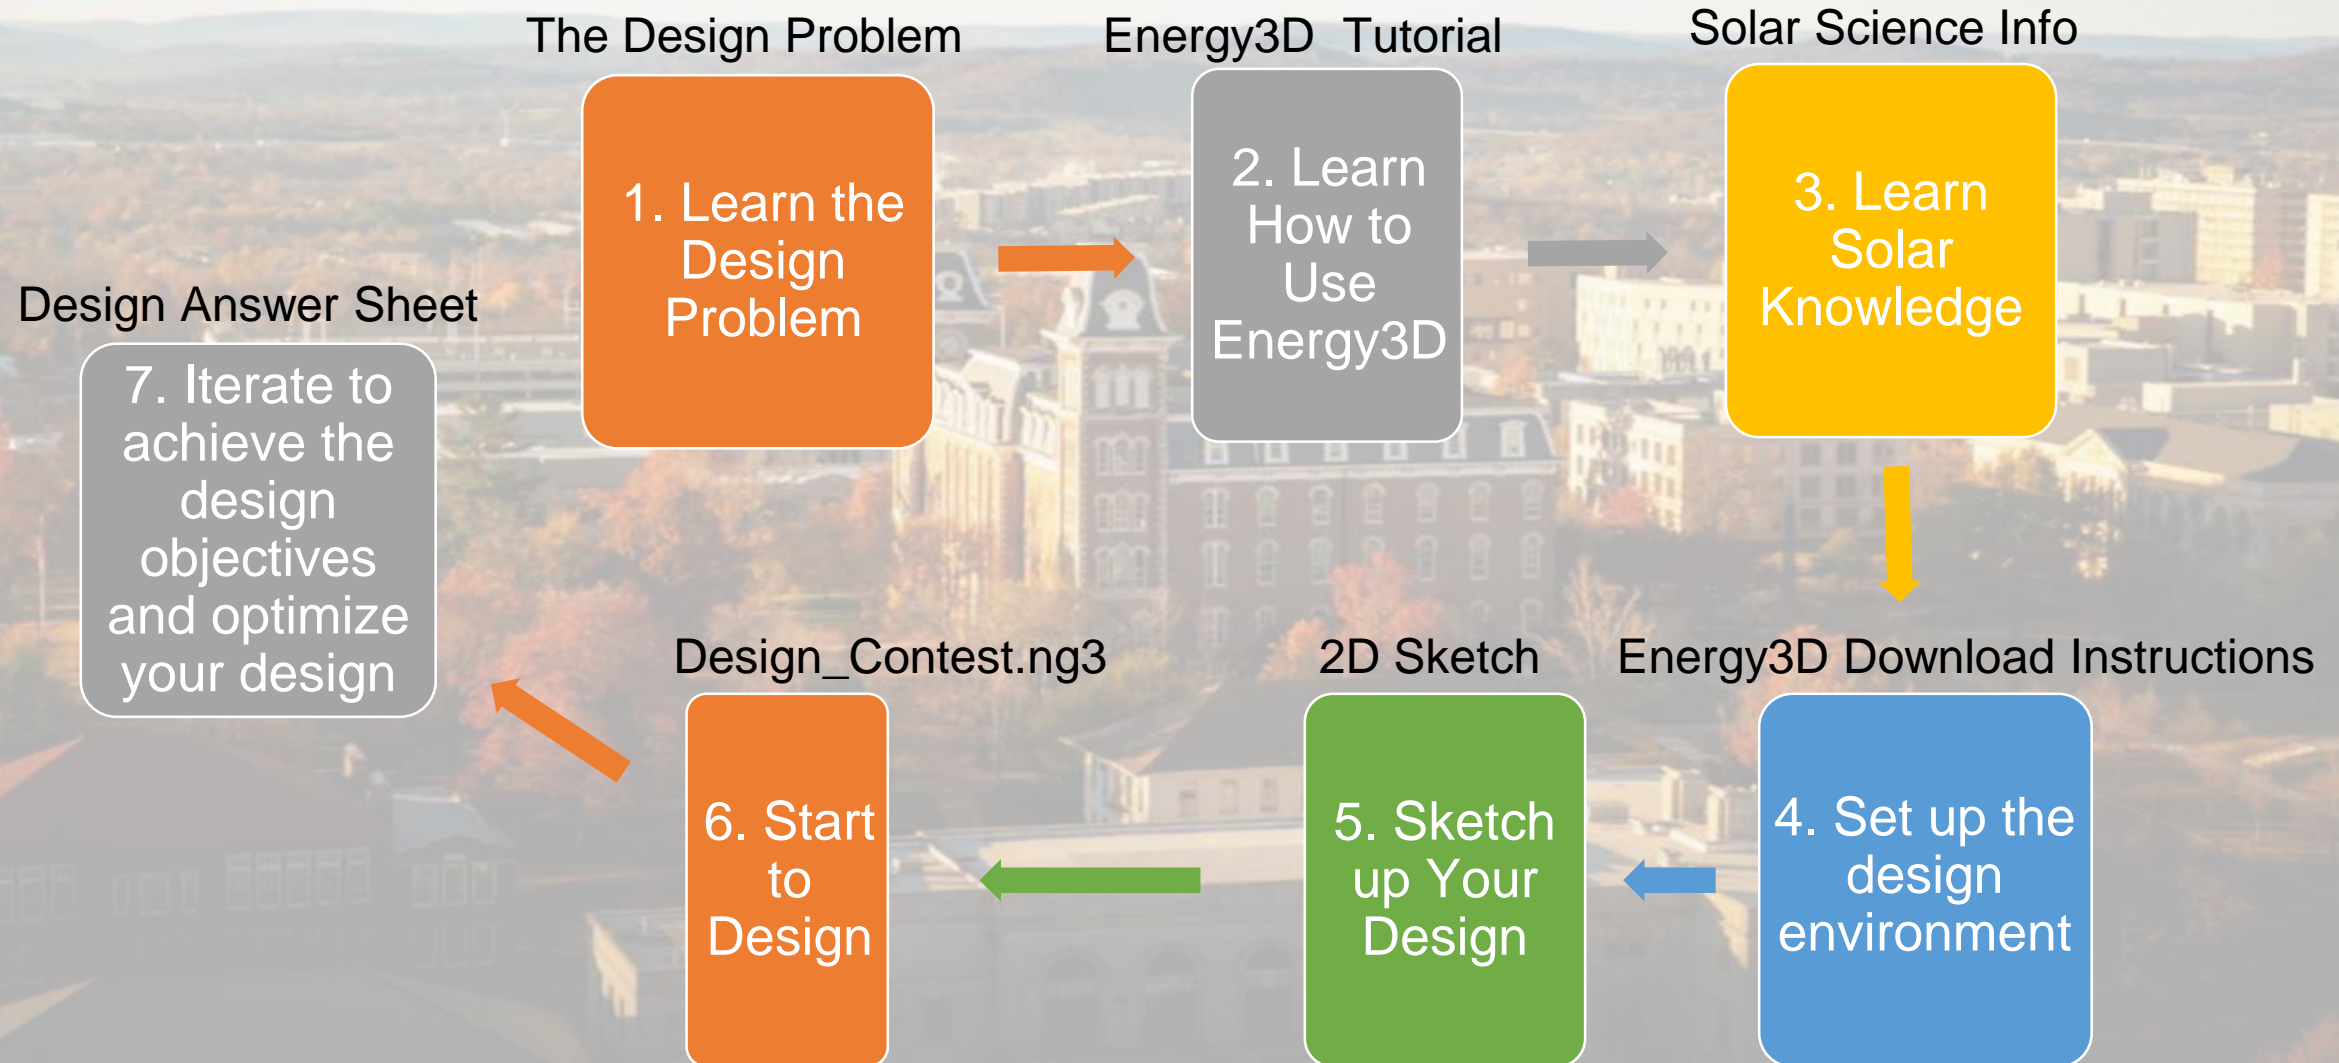

### Setup

- To download and set the design environment, follow the instructions found in the, “Energy3D Download Instructions” document

### Notice:

- If you have ever **installed Energy3D** on your computer. Please **uninstall** it first.

### Deliverable Packages

- Energy3D model
- The model log data – see the, “Data Submission Instructions” file for information on how to extract the needed data
- Design Answer Sheet
- Design Report
- 2D Sketch

### Notes

- Continue your design in one file,
- If you would like to try out other designs, save as and **RENAME** the file before doing so
- For instruction on how to extract the needed data, see the “Data Submission Instruction” file on our website

Once you have completed the design challenge, we require that you complete six additional psychological tasks.

Each of the tasks will be completed online; after you have submitted your design, we will send you an instructional document on how to complete the tasks.

**NOTE:** You must complete **ALL** of the tasks in order for your design to be considered in the contest.

## Agenda

- Introduction
- Participation
- Rules and Instructions
- **Evaluation and Awarding**

# Evaluation and Awarding

## How Entries Are Evaluated

Content		Judging Criteria
Energy3D model    <b>30%</b>	1. Layout	Rooftops and parking lots solar energy system are complete.
	2. Objectives and budget	The overall annual energy output, budget, and payback period requirements are satisfied.
	3. Practical design	The design is feasible and practical which has no violations of constraints and rules.
	4. Aesthetics	Appearance of the solar energy system meet public aesthetics.
2D Sketch  <b>15%</b>		Turn in every sketch you have drawn.
Answer sheet         <b>30%</b>	1.1 Number of solar panels	All of the design variables are recorded completely and correctly for both rooftops and parking lots solar energy system.
	1.2 Solar panel model	
	1.3 Tilt angle	
	1.4 Pole height	
	1.5 Solar panel azimuth angle	
	1.6 Annual generated electricity	
	1.7 Payback period	
	2. Your design rationale	The design rationale of each iteration is complete.
	3. Learning from each iteration	What you have learned are considered during following iterations.
Design report  <b>25%</b>	Overall design philosophy and rationale	The design report is complete and organized.

- Judges **review** final deliverable packages.
- Each content receives a **preliminary score** from each judge.
- Scores are averaged and the averages are **summed**.
- Judging panel convenes to **determine** winners.
- **1st-, 2nd-, and 3rd-place** winners are **identified and announced**.
- The winners will be announced through a virtual award ceremony; conducted through Microsoft Team.
